INTERNATIONAL BREWERIES ANALYSIS

Nwakor Henry Ikenna

2024-03-16

International Breweries

This analysis is meant to look at the profitability of some of the products of International breweries across two Anglophone countries and three Francophone countries in Africa. A data recorded for a duration of three years is provided for analysis to aid better decision making in order to maximise profit and reduce loss to the lowest minimal.

## # i 22 more rows
## # i 4 more variables: COUNTRIES <chr>, REGION <chr>, MONTHS <chr>, YEARS <dbl>
```

The minimum profit according to the data above is 38150.

7. Compare the profits for each month in 2019 in percentage

From our previous calculation we discovered that the total profit for the year 2019 is 30020250. Therefore, to get the percentage, we divide the total of each month in 2019 by the overall total all multiplied by 100. Mathematically; (total of months/Overall total)*100. Then tabulate the answer.

```
MONTHS_PERC <- tibble(
MONTHS=c("January","February","March","April","May","June","July","August","September","October","Novem
TOTAL_PROFIT=c(32613160,1366880,2530620,2851470,2573040,2669080,2945340,2982800,1892600,2220870,2675610
PERCENT=c(10.87,4.55,8.43,9.50,8.57,8.90,9.81,9.94,6.30,7.40,8.91,6.82),
)
MONTHS_PERC
```

```
## # A tibble: 12 x 3
##    MONTHS    TOTAL_PROFIT PERCENT
##    <chr>            <dbl>   <dbl>
##  1 January       32613160   10.9
##  2 February       1366880    4.55
##  3 March          2530620    8.43
##  4 April          2851470    9.5
##  5 May            2573040    8.57
##  6 June           2669080    8.9
##  7 July           2945340    9.81
##  8 August         2982800    9.94

According to the data above, Ghana has the highest profit in the fourth quarter of 2019 which is from october to december 2019.

SUMMARY

The International Breweries data set contained data from five(5) African Countries (2 Anglophone countries; Nigeria and Ghana and 3 Francophone countries; Benin, Senegal and Togo). The data contained all the records of their sales for the period three (3) years (2017-2019). The sales manager hopes to use the analyses of this data to increase profit and reduce lost to minimum. From the analysis, one can see that certain product dropped in profit over the years, this could be caused by diverse circumstances like economy, weather or the quality of the product. Regions in a country and the country itself also affect the sales and profit over the years.

CONCLUSION

With this analysis, the sales manager can now make effective business decisions that can drive the company further and away from possible losses. Adequate stakeholders will be engaged and tasked to bring these plans to fruition.
